Measure
Approach and basic tools: previous book, Chapters 1 and 3
Measurement methods in this book: "Start with Measurement"
App size is large
Out of memory / crashes
Frame drops / spikes
Size
Assets keep growing
3-1 Lifetime Management of AssetBundles
3-2 Investigating Asset Bloat
Code is large
3-4 Reducing Code with Code Stripping
3-5 Optimizing Code with LTO
Memory
Crashes at the limit
3-6 iOS Memory Limits
Not released
2-5 Lifetime Management in UniTask
3-1 Lifetime Management of AssetBundles
Rendering memory
1-1 Render Graph Tile Memory Optimization
1-5 Rendering Optimization with RSUV
2-3 Lighter Bone Animation with VAT
CPU
Many characters
2-1 Tuning Character Animation
2-2 Initializing Pooled Animators
2-3 Lighter Bone Animation with VAT
One-off spike
2-4 ParticleSystem Simulate Spikes
Draw registration / UI
1-2 Lighter Draw Registration with UnsafePass
2-6 Choosing UI Systems
C# code overall
3-5 Optimizing Code with LTO
GPU
Memory bandwidth
1-1 Render Graph Tile Memory Optimization
1-3 Omitting FinalBlitPass
Shader arithmetic
1-4 Lighter Transcendental Functions
Stutter at first draw
1-6 Shader Warmup
Mass drawing / device gaps
1-5 Rendering Optimization with RSUV
3-3 Per-Device Rendering Settings
